

Product Solutions to Suppress Dust and Reduce Downtime

August 4, 2015 at 10:00 AM EDT

Quaker Chemical Corporation Exhibits at the 2015 Illinois Mining Institute (IMI) Annual Meeting

CONSHOHOCKEN, Pa., Aug. 4, 2015 /PRNewswire/ -- In any mining operation, particularly underground coal mining, respirable coal dust is a detrimental but inherent consequence, resulting in health and safety hazards to workers. Overexposure to respirable coal mine dust can lead to coal workers' pneumoconiosis (CWP), and the formation of dust clouds that can become explosive if a methane ignition occurs.

For more industry related information, please visit: <http://www.quakerchem.com/dustgrip/>

The need for improved dust control in mining operations is evident from the Mine Safety and Health Administration's (MSHA's) new respirable dust regulation, which requires lowering the level of respirable dust from 2.0 mg/m³ to 1.5 mg/m³, and mandates a significant increase in sampling frequency. These new regulations require full compliance by August 1, 2016. In alignment with MSHA's new regulations, **Quaker Chemical Corporation** (NYSE: KWR, "Quaker") offers DUSTGRIP®, a family of dust suppressant products, with the following proven benefits*:

- **Reduction in the generation of airborne particles in mining operations**
- **Ability to act as a settling aid in various water treatment and washing applications, keeping water lines and water sprays clean, and reducing the amount of equipment changes needed**
